DETAILED ACTION

Allowable Subject Matter

Claim 22 is allowed.

Smith et al. (US 5,620,594) teaches a water management system is disclosed comprising a first distribution system having a wastewater outlet connected to a settling chamber, which has an overflow to a discharge chamber. The settling chamber has a means for removing settled solids comprising a fluidizing duct having a supply unit connected to a source of water under pressure and a discharge duct within the supply duct for discharge of a slurry of solids from the settling chamber. The discharge chamber is connected to a storage tank for supplying treated water to a second water distribution system.

Kodate (US 4,987,913) teaches a storm water pumps drain storm water in a pump well. In order to control the storm water pumps, a radar rain gage and ground raingages are set. Measurement data from the radar rain gage and the ground rain gages are supplied to a data processing unit. The data processing unit calibrates rainfall distribution data representing a two-dimensional rainfall distribution state obtained by the radar rain gage by the measurement data from the ground rain gages, and forecasts a rainfall in a predetermined time from the present from several sets of the calibrated rainfall distribution data. The data processing unit performs runoff analysis corresponding to characteristics of a drainage basin on the basis of the forecast rainfall to calculate a rainfall flow, thereby forecasting a flow of storm water

flowing in the pump well. The data processing unit determines the number of pumps to be operated in consideration of the flow of storm water flowing in the pump well, a water level of a water level gauge, and the number of currently operating pumps, thereby controlling an operation of the storm water pumps.

Reasons for Allowance

The following is an examiner's statement of reasons for allowance: The prior art of record or any combination of prior art searched fails to teach the limitation of performing a pattern matching analysis between rainfall-derived infiltration and inflow factor information for each of said districts and the amount of rainfall-derived infiltration and inflow at a corresponding base point located downstream of each of said districts, and outputting the results of said pattern matching analysis.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
